How to Add SdCloud Calendar to Android

1. Login to **SdCloud** on a web browser (like Google Chrome) on your phone
2. In the top left-hand corner, click the word 'Files' to open the app menu where you then select '**Calendar**'
3. In the bottom-left of the screen, click '**settings & import**'
4. Highly and **copy** the contents of the box below 'iOS/OS X CalDAV address' (yes, this box, even though it says iOS/OS X)
5. Download, from the Play Store, the app called **One Calendar** *(it has over 1M+ downloads)*. Then open it.
6. Tap **Add Account** and then select **CalDAV**
7. For User Name, enter your full @sdplus.org email address (ex: first.last@sdplus.org)
8. For Password, enter your full Sd email address password (ex: Sda2025xx!)
9. For Server, paste what you copied from the iOS/OS X CalDAV address on the cloud (ex: https://sdcloud.sdplus.us/remote.php/dav/principals/users/YourCloudUsername
10. Click **Connect**, ensure all calendars you want to see are checked with blue boxes, and then tap on **Done**.
11. On the final screen tap **Done** and wait a few seconds to a minute for the calendars to load.

   That's it, the subscribed Calendar(s) will now show up in the One Calendar app.
